

MARS

This is a 2001 **Hubble Space Telescope** photograph of the planet **Mars** 43 million miles away from Earth, for comparison the diameter of Mars is 4,222 miles and Earth's is 12,756 miles; surface gravity is 0.38 of Earth; surface atmospheric pressure is 0.007 of Earth.

In this 1997 NASA photograph, the rover **Sojourner** is driving around on the surface of Mars where it bumped into this rock which scientists named **Yogi**.

There's a Martian rock fragment in the *Space Rocks* meteorite specimens that you can hold.
