

THE PEEKSKILL METEORITE HIT A GIRL'S PARKED CAR

In this famous October 9, 1992 photograph by S. Eichmiller, the original **meteoroid** is shown breaking up and producing multiple meteors in the night sky over Altoona, Pennsylvania, seconds before dropping a **meteorite** on the car in Peekskill, New York.

THIS **STONE METEORITE**, ABOUT THE SIZE OF A BOWLING BALL, SMASHED A HOLE RIGHT THROUGH THE TRUNK OF THE 1980 RED CHEVY MALIBU (BELOW).

Teenager Michelle Knapp was watching TV at home, when the meteorite hit her parked car.

There's a piece of the Peekskill Meteorite in the *Space Rocks* specimens that you hold.
